

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Quality Management for Clinical Services

Anuwat Supachutikul, M.D.

Former CEO, Healthcare Accreditation Institute, Thailand

For Delegates from Bangladesh

5 March 2019

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Do we need to be in a hurry about quality & safety?
What should be an incentive to make change?

Topics

1. Transformation 1: review of daily activities
2. Transformation 2: quality management system (QMS)
3. Transformation 3: standard guided QMS
4. Transformation 4: performance excellence

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Transformation 1: Review of Daily Activities

A Simple Set of Questions

What are we doing?

Why are we doing so?

Purpose →
Why do we exist?

How well are we doing?
How do we know?

How can we improve it?

Learning from Daily Activities

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Need & Expectation

Listen, interact, observe
Complaint management

Evidence & Knowledge

Evidence-based
Gap analysis
Knowledge sharing & management

Waste reduction

Identify & get rid of non-value added process
Rational use of resources

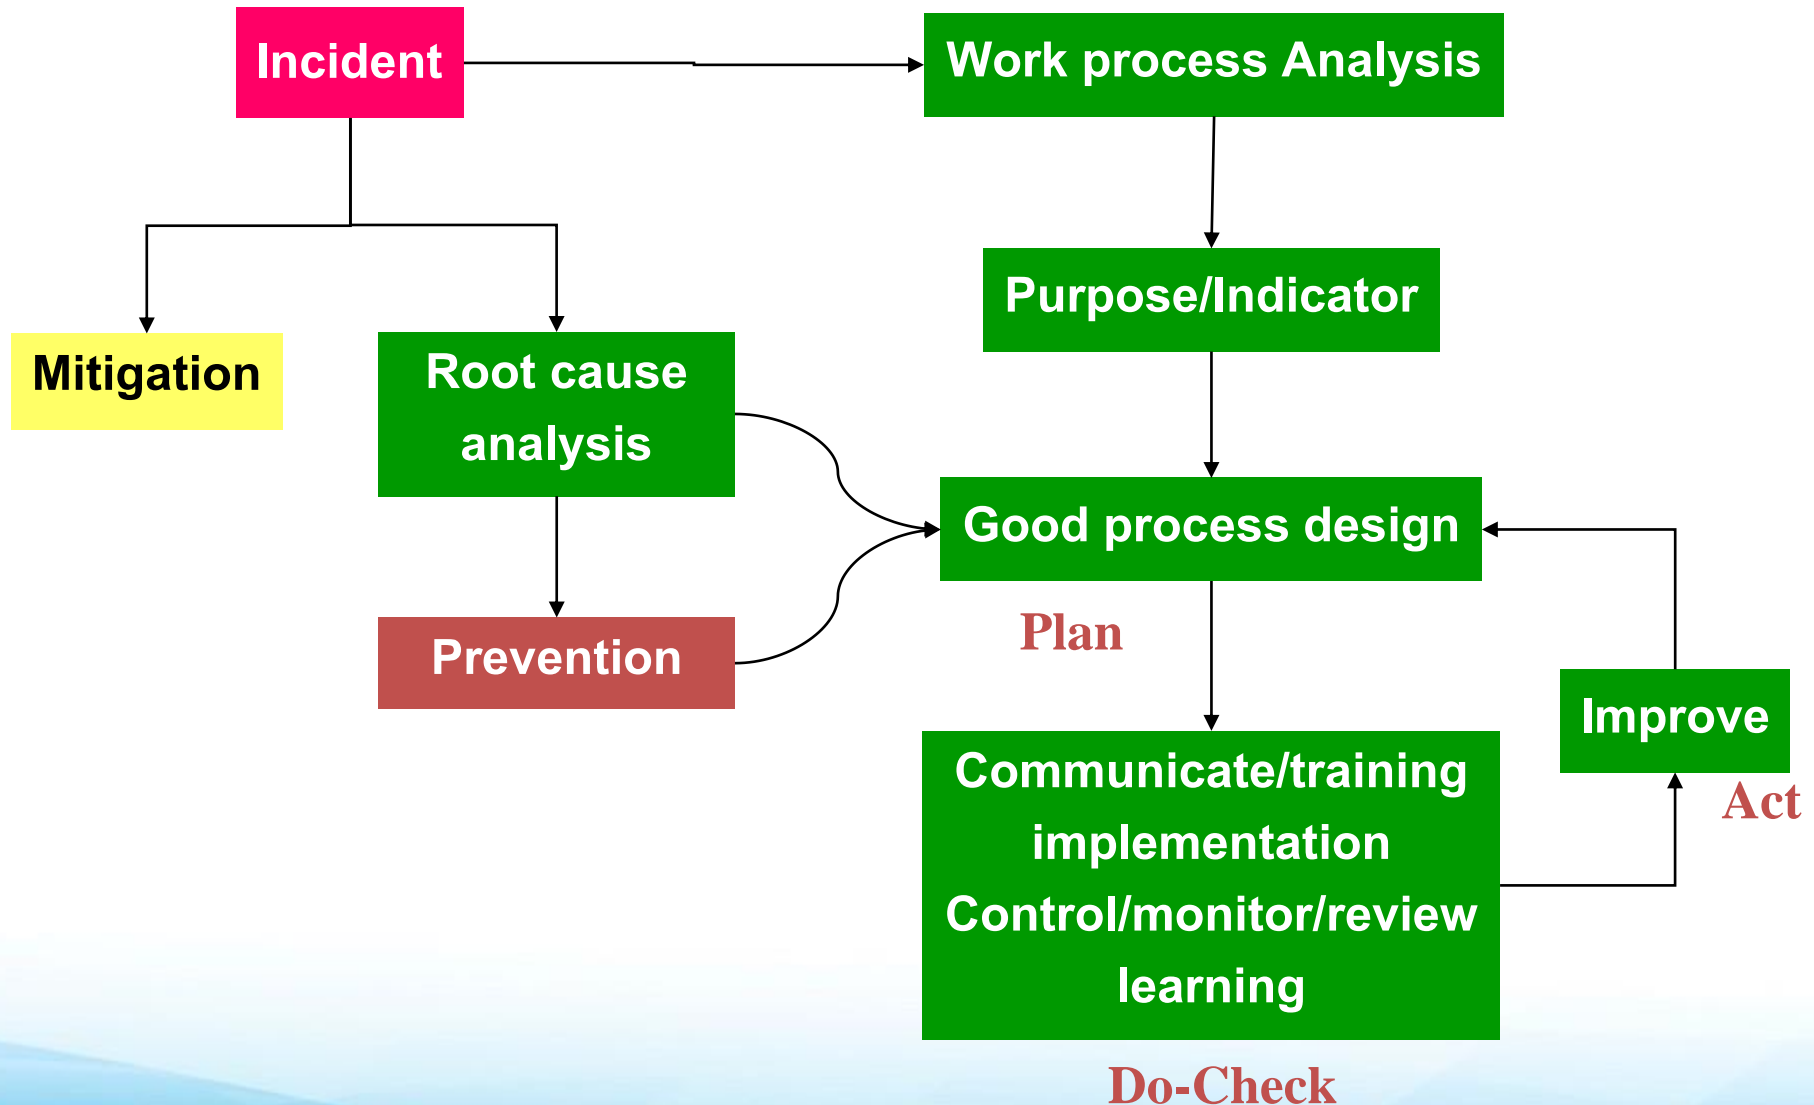

Safety

Learning from incident/failure
Learning from concurrent triggers
Learning from feedback (behavior)
Learning to build safety culture

Trigger Tools & Concurrent Review

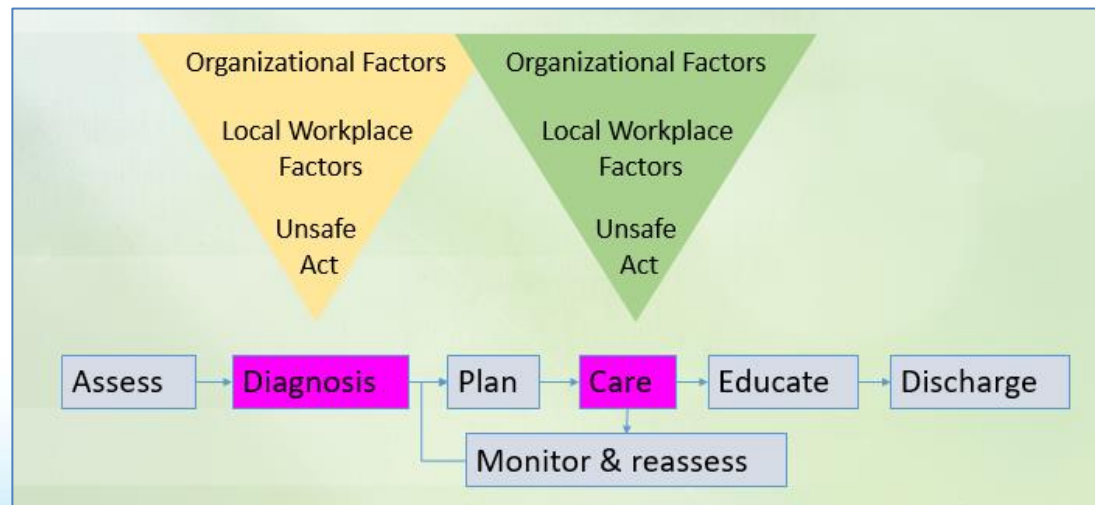

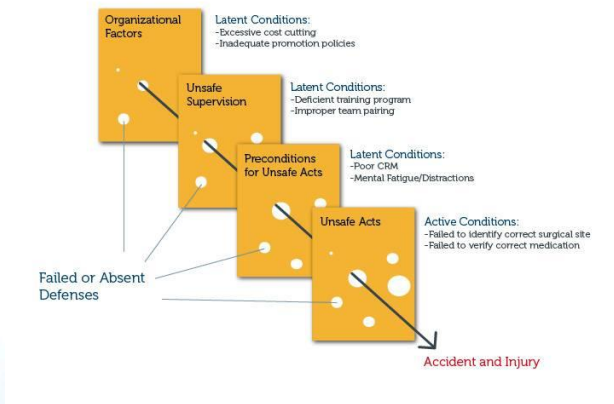

1. Monitoring of daily incident
 - e.g. fall, pressure sore, infection, med error, ADR
2. Concurrent review alerted by triggers
 - Lab (pos blood culture, PTT>100, INR>6, glucose<50, 2x rising BUN)
 - Pharmacy (vit K, Benadryl, Naloxone, Flumazenil, anti-emetic admin)
 - OR (change in proc., intra-op X-ray, intra or post-op death, organ inj/removal)
 - RR (intubation/reintubation/BiPAP use, X-ray in RR)
 - ICU (post-op ICU admission, use of post-op ventilator >24 hrs)
 - LR (instrumented delivery)
 - Blood bank
3. Review of treatment failure
 - ER revisit
 - 30-day readmission
 - ICU readmission
 - Repeat surgery
 - Refer to higher level of care
 - Death
4. Other reviews
 - Patient experience & complaint
 - Efficiency of work process & resource utilization

Learning from mistake

Root Cause Analysis & Action

0. Prioritization & assign RCA team
1. Map story & timeline
2. Identify potential unsafe act (or change)
3. Listen, observe, & investigate
4. Identify root causes / contributing factors
5. Propose creative solution (using human factors concept)

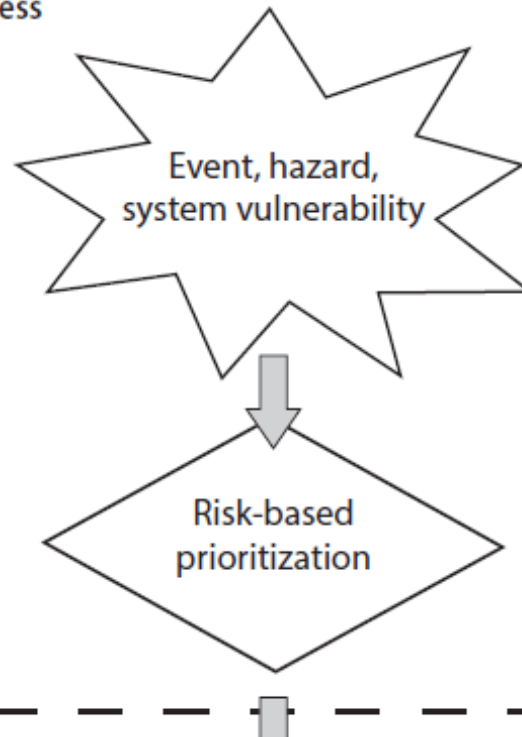

Immediate Action & Prioritization in 72 hours

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Figure 2. Individual RCA² Process

Immediate actions are taken to care for the patient, make the situation safe for others, and sequester equipment, products, or materials.

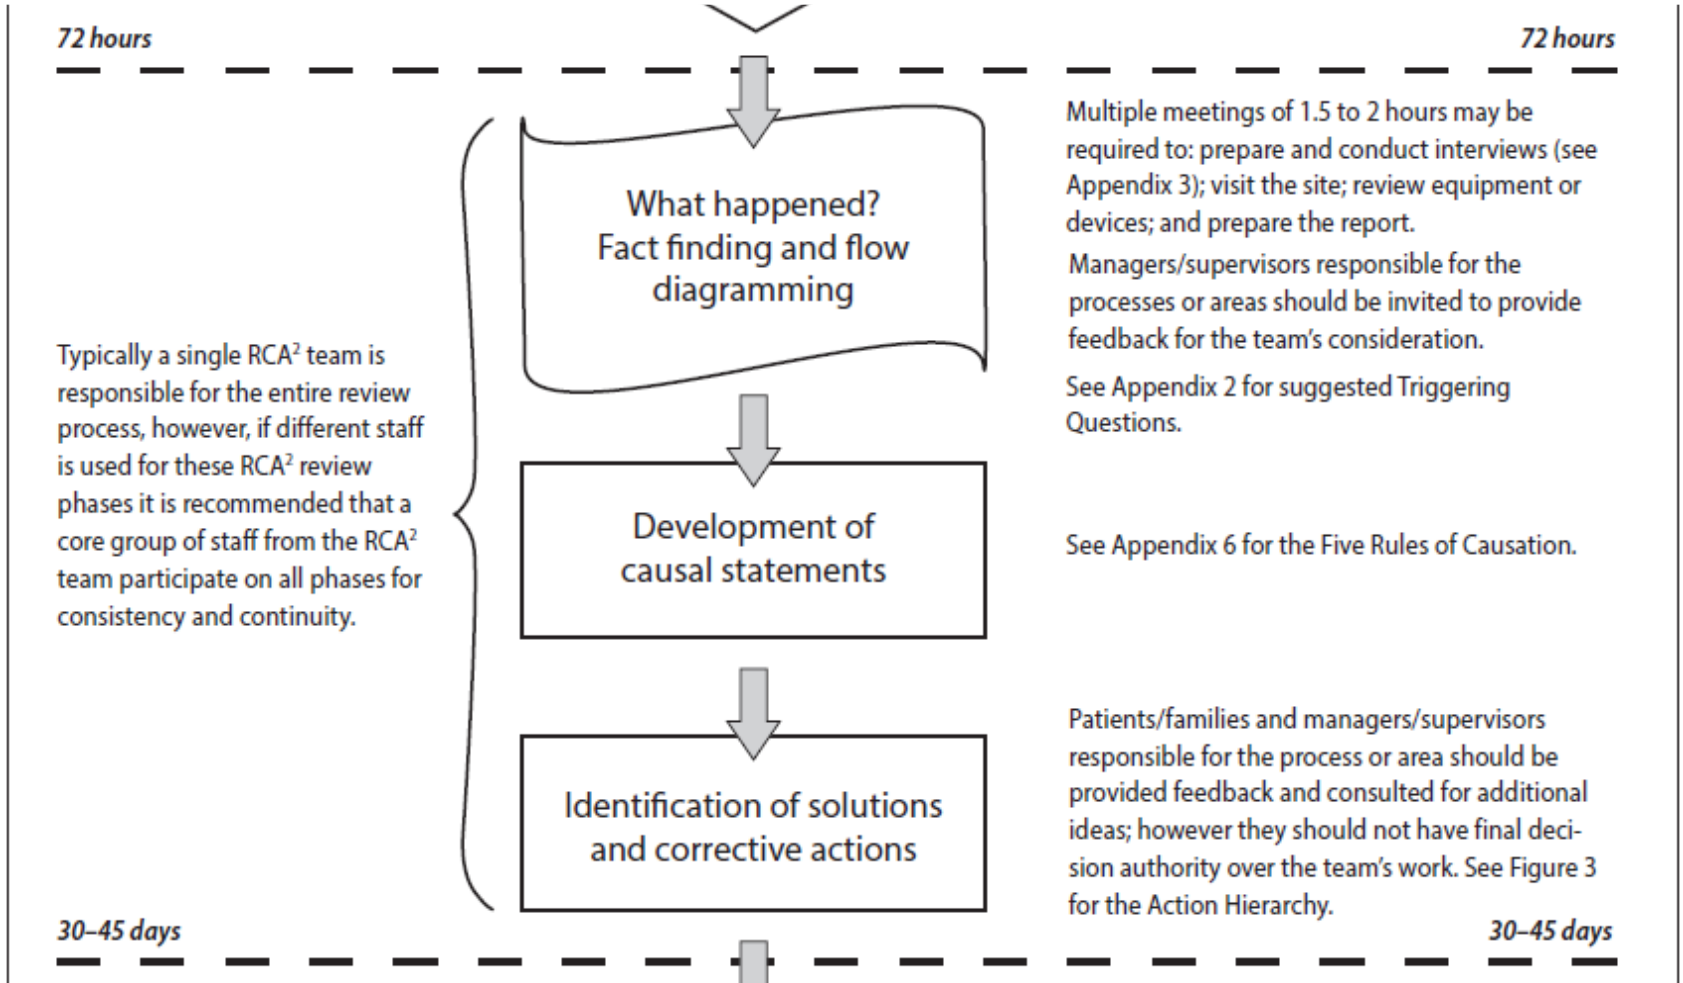

Patient safety, risk or quality management is typically responsible for the prioritization; for consistency one person is assigned responsibility for applying the risk matrix. See Appendix 1.

72 hours

72 hours

RCA & Solution Identification in 30-45 days

Implementation of Action

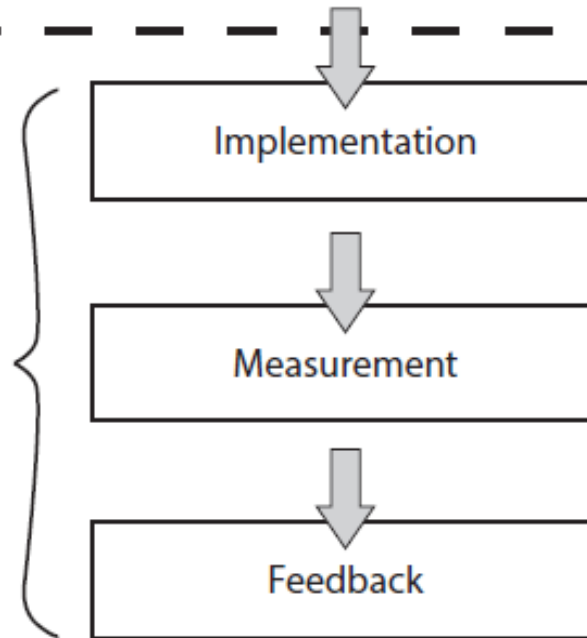

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

30-45 days

30-45 days

The RCA² team is not usually responsible for these activities.

A responsible individual with the authority to act, not a team or committee, should be responsible for ensuring action implementation.

Each action should have a process or outcome measure identifying what will be measured, the expected compliance level, and the date it will be measured. An individual should be identified who will be responsible for measuring and reporting on action effectiveness.

Feedback should be provided to the CEO/board, service/department, staff involved, patient and/or patient's family, the organization, and the patient safety organization (if relevant).

Safety Assessment Codes (SAC) Matrix

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

SAC Score 3 = mandate for RCA

Severity Score: use potential rather than actual score

	Severity	Catastrophic	Major	Moderate	Minor
Probability	Frequent	3	3	2	1
	Occasional	3	2	1	1
	Uncommon	3	2	1	1
	Remote	3	2	1	1

- (1) Frequent – Likely to occur immediately or within a short period (several times in 1 Y)
- (2) Occasional – Probably will occur (may happen several times in 1 to 2 years)
- (3) Uncommon – Possible to occur (may happen sometime in 2 to 5 years)
- (4) Remote – Unlikely to occur (may happen sometime in 5 to 30 years)

Available data
Feeling/opinion
Educated guess

Severity Score

<p>Catastrophic</p> <p><u>Patients with Actual or Potential:</u> Death or major permanent loss of function (sensory, motor, physiologic, or intellectual) not related to the natural course of the patient's illness or underlying condition (i.e., acts of commission or omission). This includes outcomes that are a direct result of injuries sustained in a fall; or associated with an unauthorized departure from an around-the-clock treatment setting; or the result of an assault or other crime. Any of the adverse events defined by the Joint Commission as reviewable "Sentinel Events" should also be considered in this category.</p> <p><u>Visitors:</u> A death; or hospitalization of three or more visitors <u>Staff:</u> A death or hospitalization of three or more staff*</p>	<p>Major</p> <p><u>Patients with Actual or Potential:</u> Permanent lessening of bodily functioning (sensory, motor, physiologic, or intellectual) not related to the natural course of the patient's illness or underlying conditions (i.e., acts of commission or omission) or any of the following:</p> <ol style="list-style-type: none"> Disfigurement Surgical intervention required Increased length of stay for three or more patients Increased level of care for three or more patients <p><u>Visitors:</u> Hospitalization of one or two visitors</p> <p><u>Staff:</u> Hospitalization of one or two staff or three or more staff experiencing lost time or restricted duty injuries or illnesses</p> <p><u>Equipment or facility:</u> Damage equal to or more than \$100,000**.* †</p>
<p>Moderate</p> <p><u>Patients with Actual or Potential:</u> Increased length of stay or increased level of care for one or two patients</p> <p><u>Visitors:</u> Evaluation and treatment for one or two visitors (less than hospitalization)</p> <p><u>Staff:</u> Medical expenses, lost time or restricted duty injuries or illness for one or two staff</p> <p><u>Equipment or facility:</u> Damage more than \$10,000, but less than \$100,000**.* †</p>	<p>Minor</p> <p><u>Patients with Actual or Potential:</u> No injury, nor increased length of stay nor increased level of care</p> <p><u>Visitors:</u> Evaluated and no treatment required or refused treatment</p> <p><u>Staff:</u> First aid treatment only with no lost time, nor restricted duty injuries nor illnesses</p> <p><u>Equipment or facility:</u> Damage less than \$10,000 or loss of any utility without adverse patient outcome (e.g., power, natural gas, electricity, water, communications, transport, heat and/or air conditioning)**.* †</p>

RCA Team

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Figure 1. RCA² Team Membership* and Involvement

<i>NOTE: An individual may serve in multiple capacities</i>	Team Member?	Interview?
Subject matter expert(s) on the event or close call process being evaluated	Yes	Yes, if not on the team
Individual(s) not familiar with (naïve to) the event or close call process	Yes	No
Leader who is well versed in the RCA ² process	Yes	No
Staff directly involved in the event	No	Yes
Front line staff working in the area/process	Yes	Yes
Patient involved in the event	No	Yes**
Family of patient involved in the event	No	Yes**
Patient representative	Yes	Yes
<p><i>*Strongly consider including facility engineering, biomedical engineering, information technology, or pharmacy staff on an RCA² team, as individuals in these disciplines tend to think in terms of systems and often have system-based mindsets. Including medical residents on a team when they are available is also suggested.</i></p> <p><i>** This might not be needed for some close calls or events that are far removed from the bedside (e.g., an incorrect reagent that is used in the lab).</i></p>		

Actions in RCA

- Graphically describe the event using a **chronological Flow Diagram or timeline**.
- Identify **gaps** in knowledge about the event.
- **Visit the location** of the event to obtain firsthand knowledge about the workspace and environment.
- Evaluate **equipment or products** that were involved.
- Identify team-generated questions that need to be answered.
- Use **Triggering Questions** (see Appendix 2) and team-generated open-ended questions that can broaden the scope of the review by adding additional areas of inquiry.
- Identify staff who may have answers to the questions and conduct **interviews** (see the Interviewing Tips in Appendix 3) of involved parties including staff and affected patients.
- Include patients, family, or a patient **representative** as appropriate to ensure a thorough understanding of the facts.
- Identify **internal documents** to review (e.g., policies, procedures, medical records, maintenance records).
- Identify pertinent **external documents** or recommended practices to review (e.g., peer reviewed publications, manufacturers' literature, equipment manuals, professional organization guidance and publications).
- Identify and acquire appropriate **expertise** to understand the event under review. This may require interactions with internal and external sources of expertise (e.g., manufacturers, vendors, professional organizations, regulatory organizations).
- Enhance the Flow Diagram (see the sample in Appendix 4) or timeline to reflect the final understanding of events and where hazards or system vulnerabilities are located.
- Provide **feedback** to the involved staff and patients, as well as feedback to the organization as a whole.

5 Rules of Causation

Rule	Incorrect	Correct
Clearly show the “cause and effect relationship”	RN was fatigued	RN worked 3 16 hour shifts, which led to fatigue and increased risk of misreading...
Use specific and accurate descriptors for what occurred, rather than negative and vague	Manual was poorly written	Manual had 8 point font/no illustrations; RNs didn't use it; increased likelihood of incorrect programming of pumps
Human errors must have a preceding cause	RN selected wrong dose; patient overdosed	Drugs in CPOE are presented without sufficient space between doses, increasing chance of wrong dose and overdose
Violations of procedure are not root causes, but must have a preceding cause	RN didn't follow procedure for CT scan	Noise and confusion in prep area, with production pressures, increased chance that CT scan protocol would be missed...
Failure to act is only causal when there is a pre-existing duty to act	RN did not check for STAT orders every half hour	No assignment for designated RN to check orders at specific times increased likelihood that STAT orders are missed

Action Hierarchy

Stronger	Intermediate	Weaker
<ul style="list-style-type: none"> • New devices with usability testing • Engineering control (forcing function) • Simplify the process • Standardization • Tangible involvement by leadership 	<ul style="list-style-type: none"> • Eliminate/reduce distractions • Education using simulation-based training with periodic refresher sessions and observations • Standardized communication tools 	<ul style="list-style-type: none"> • Double checks • Warnings • New policy • Training

Centers for Disease Control and Prevention, National Institute for Occupational Safety and Health, Hierarchy of Controls www.cdc.gov/niosh/topics/hierarchy/

Recommendation for RCA²

1. Leadership (e.g., CEO, board of directors) should be actively involved in the root cause analysis and action (RCA₂) process. This should be accomplished by supporting the process, approving and periodically reviewing the status of actions, understanding what a thorough RCA₂ report should include, and acting when reviews do not meet minimum requirements.
2. Leadership should review the RCA₂ process at least annually for effectiveness.
3. Blameworthy events that are not appropriate for RCA₂ review should be defined.
4. Facilities should use a transparent, formal, and explicit risk-based prioritization system to identify adverse events, close calls, and system vulnerabilities requiring RCA₂ review.
5. An RCA₂ review should be started within 72 hours of recognizing that a review is needed. RCA₂ teams should be composed of 4 to 6 people. The team should include process experts as well as other individuals drawn from all levels of the organization, and inclusion of a patient representative unrelated to the event should be considered.

Recommendation for RCA²

6. Team membership should not include individuals who were involved in the event or close call being reviewed, but those individuals should be interviewed for information.
7. Time should be provided during the normal work shift for staff to serve on an RCA2 team, including attending meetings, researching, and conducting interviews.
8. RCA2 tools (e.g., interviewing techniques, Flow Diagramming, Cause and Effect Diagramming, Five Rules of Causation, Action Hierarchy, Process /Outcome Measures) should be used by teams to assist in the investigation process and the identification of strong and intermediate strength corrective actions.
9. Feedback should be provided to staff involved in the event as well as to patients and/or their family members regarding the findings of the RCA2 process.

Link Academic Activities with Risk Management System

- 1. For each MM Conference** or similar activity, add 4 more questions to be considered:
 - Any diagnostic error?
 - Any adverse event (AE)?
 - If yes, what's the root cause?
 - How can we prevent that AE?
- 2. Link** those information with the hospital's risk management system

Transformation 2: Quality Management System

Quality in All Domain/Areas

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

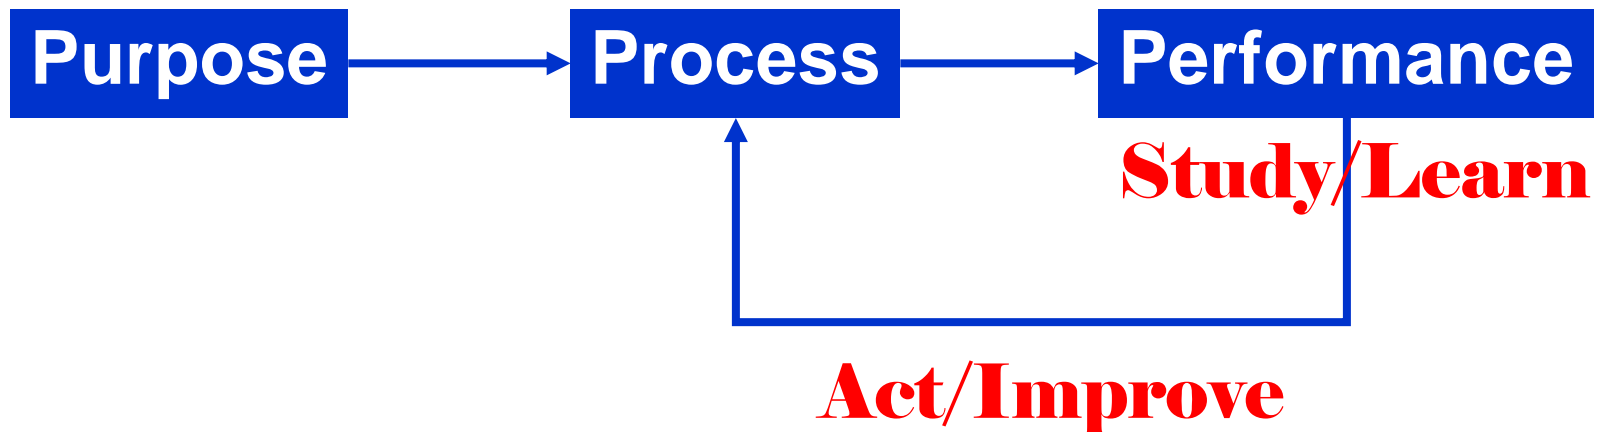

Key work systems

- Leadership
- Information technology
- Human resource
- Financial management
- Facility management
- Quality & risk management
- Professional governance
- Medication management
- Infection control
- Medical record management
- Patient care
- Ancillary services

3P: Simple Model for Quality

Driver Diagram as a Conceptual Framework

Waitemata Survive Sepsis Driver Diagram

Defining Measures/Indicators

1. “What are we **trying to accomplish?**”
2. Think of “**outcome**” & “**process**” indicators.
3. Think of **various perspective** of quality:
 - Safety
 - Satisfaction
 - Efficiency
 - Access
4. Define indicators for various boxes in **driver diagram**
5. Define indicators for **key processes**

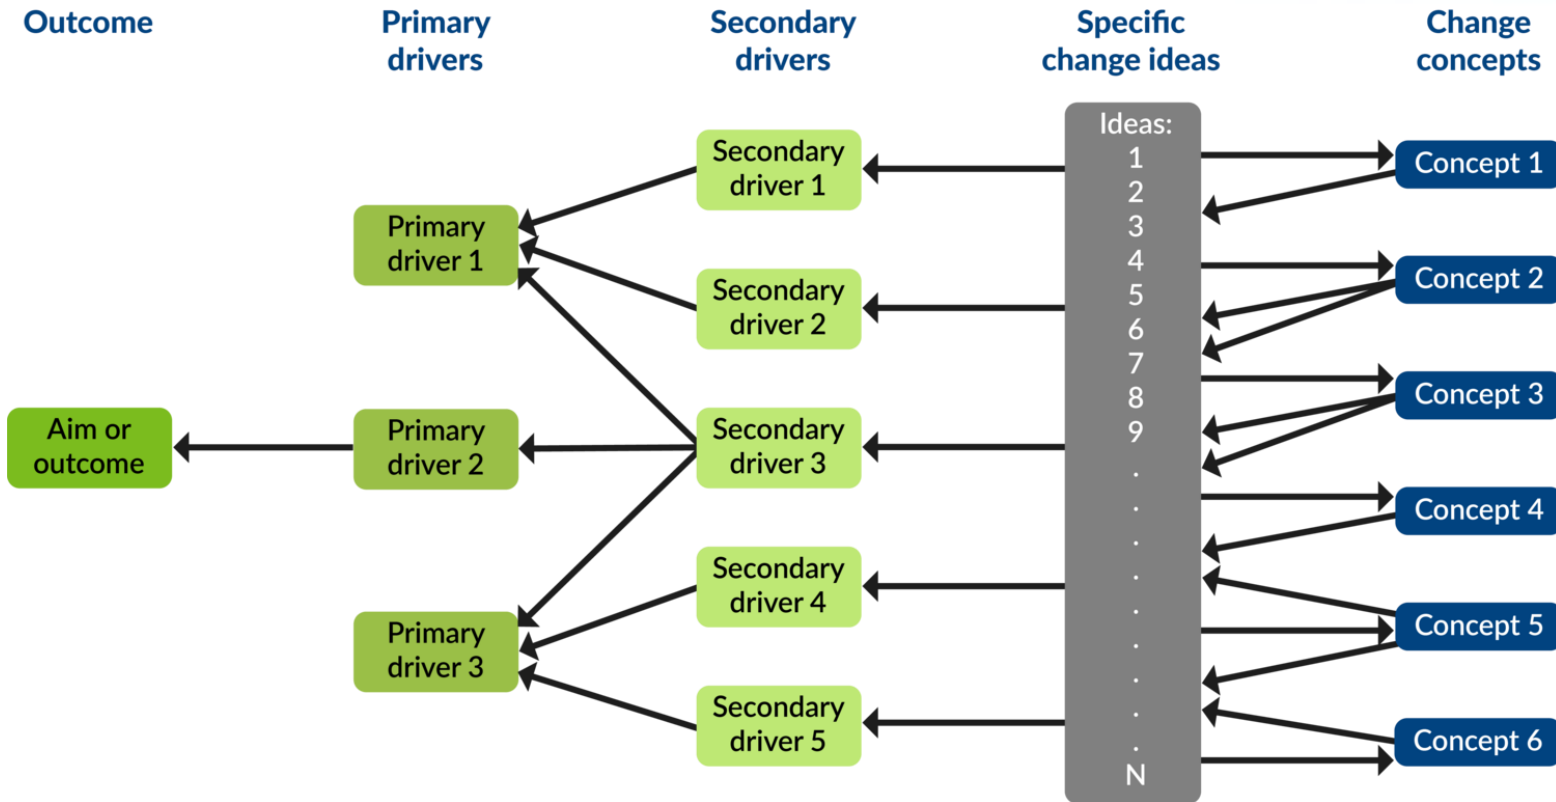

Using Control Chart to Understand Variation

Process Management

Design Principle

- Avoid reliance on memory**
- Simplify process**
- Standardize common process**
- Use forcing functions and constraints**
- Use redundancies (double check, cognitive review)**
- Take advantage of habits and patterns**
- Promote effective team functioning**
- Task analysis & workflow**

Ensure Consistency of Practice

Transformation 3: Standard Guided Quality Management System

Standards: a framework of key components of a quality healthcare organization and the relationship among those components

Use standards with new paradigm

- **A basis for comparison.**
- **A principle use for the measure of quality.**

- **An explicit statement of expected quality**
- **Performance specifications that, will lead to the highest possible quality in the system.**

HA use evaluation to encourage improvement of hospital work systems, resulted in learning and continuous improvement

Hospital and Healthcare Standards, 4th Edition

Systematic Approach to Implement HA Standards

Context & Standards -> Key Issues to Improve

- ☛ **WHO** : concern with special group of patients or staff
- ☛ **WHERE** : concern with some service area
- ☛ **WHEN** : concern with specific timing

Standards

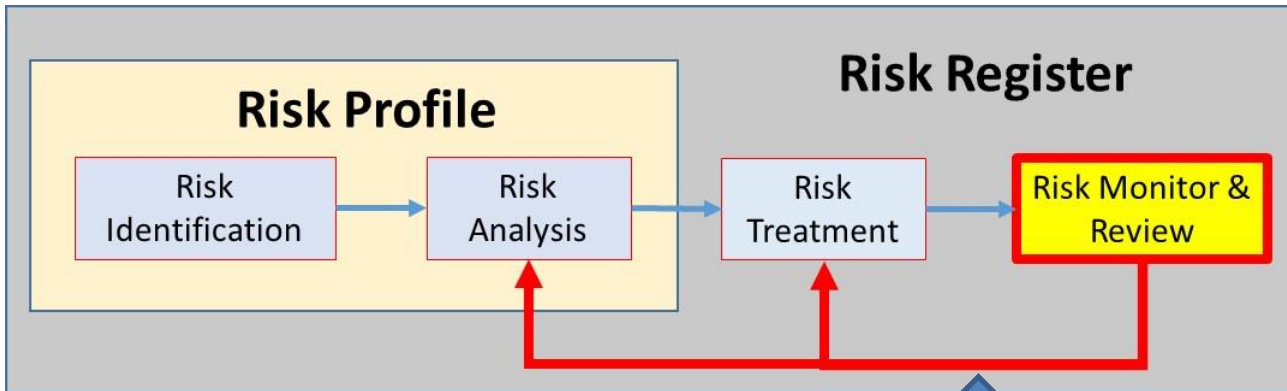

Target Population

- ☛ **What is the purpose of the standard**
- ☛ **What are the gaps in standard implementation**
- ☛ **Is there any missing in the linkage between key steps**
- ☛ **What is the impact of those gaps**

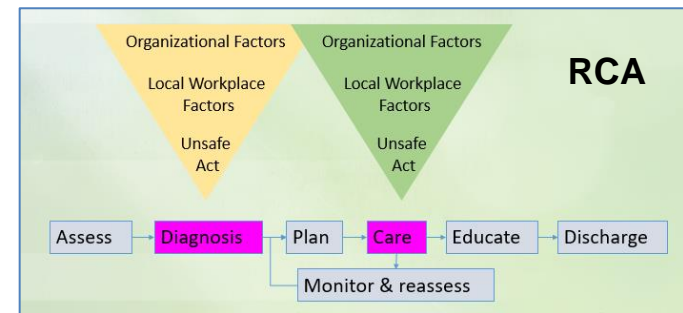

From RCA to Risk Register

Monitoring & Review

- Compliance to the preventive measure
- Trend of incident
- Result of RCA

Review of Risk Treatment Plan
What preventive measure should be added or improve?

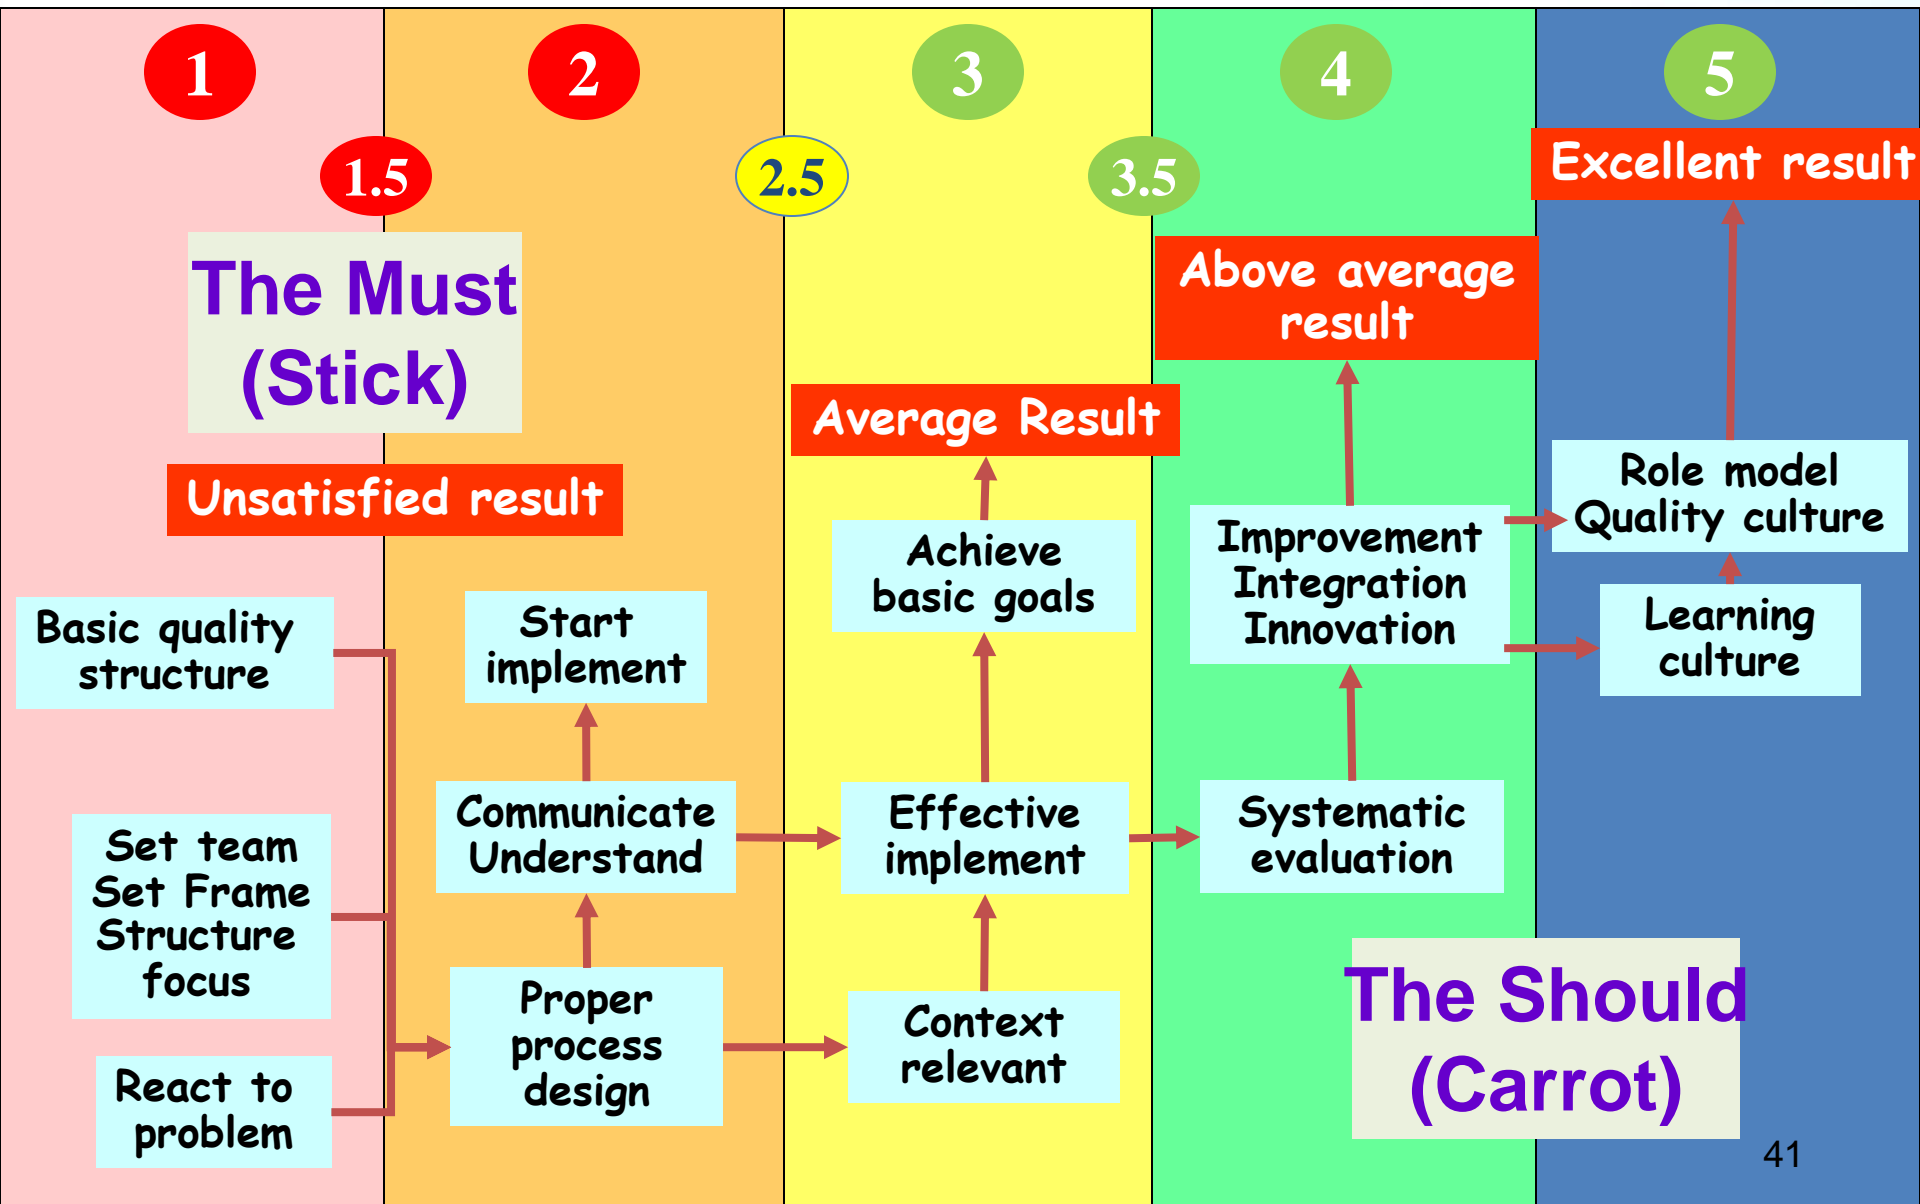

Find the Root Causes

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Local Workplace Factors	Organizational Factors
Patient characteristics	Guideline for this type of patient
Staff fatigue, stress, loss concentration	Work system & environment to prevent
Staff knowledge & skill	Training, information, reminder
Clarity of role & responsibility	Job assignment
Communication among team members	Guideline for documentation, communication, hand-over
Readiness of equipment, device, medication & supplies, facilities	Resource management & adequacy
	Monitoring system & response
	Work process design
	Organization policy & culture

Scoring Guideline: For Continuous Improvement to Excellence

Rapid Assessment

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

- **Aim to find opportunity for improvement in a short period of time**
- **Be clear on the issues to be assessed and the results to be used**
- **Use as small samples as possible**
- **Use a few valid questions, combine quantitative and qualitative questions**

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Transformation 4: Performance Excellence

Performance Excellence

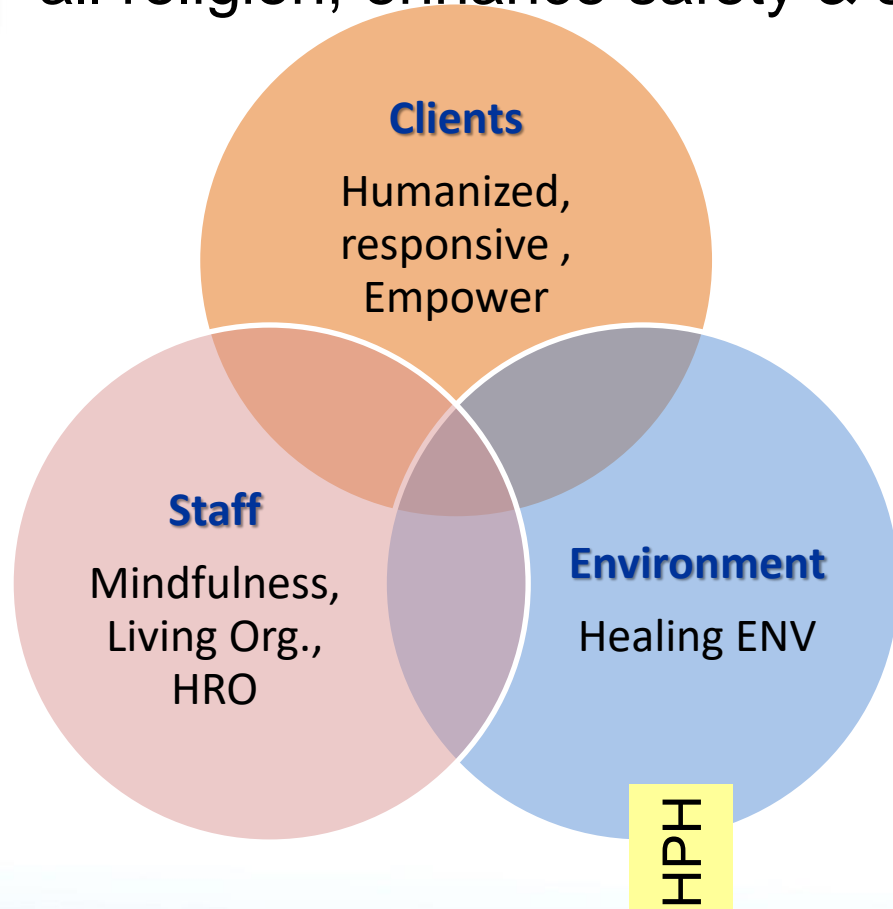

- Measure key performance**
 - **Key work system**
 - **Key patient population**
- Benchmarking & continuous improvement**
- Improve maturity of the organization**
 - **React to problem -> improvement orientation -.**
Systematic evaluation & improvement -> learning & strategic improvement -> organizational innovation
- Pursue strategic opportunities**
- Prepare for future organizational needs**

Moving with Spirituality

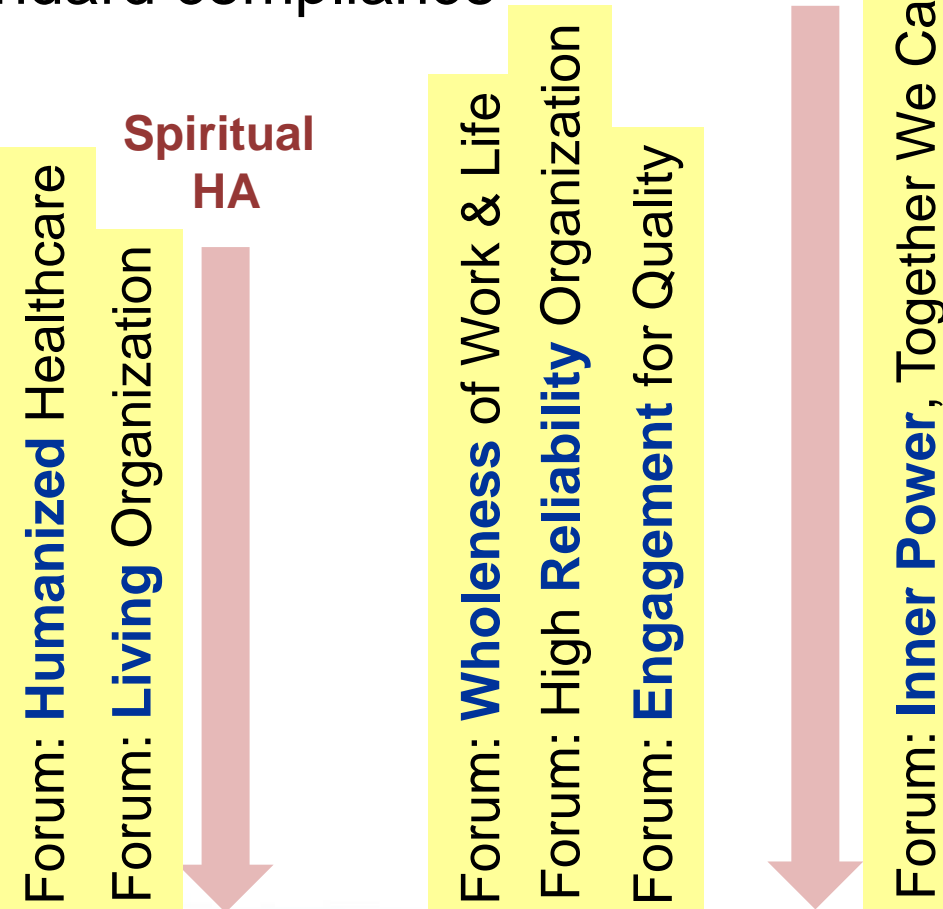

สถาบันรับรองคุณภาพสถานพยาบาล (องค์การมหาชน)
The Healthcare Accreditation Institute (Public Organization)

Concepts: Spirituality is our capital, universal to all religion, enhance safety & standard compliance

Spiritual Recognition

Transformation 0:

Change individual's way of thinking, way of communication, and way of treating each other

Baldrige Core Values & Concepts

- Systems perspective
- Visionary leadership
- Customer driven excellence
- Valuing people
- Organizational learning and agility
- Focus on success
- Managing for innovation
- Management by fact
- Societal responsibility
- Ethics and transparency
- Delivering value and results
